

## PC Power Manager for ePO

### The Fastest, Easiest, Way to Find Extra Money in Your IT Budget is to Reduce PC Energy Bills up to 65%

Autonomic Software’s enterprise tested *PC Power Manager for ePO* is fully integrated into McAfee’s world-class security framework ePolicy Orchestrator (ePO). This integration provides users the ability to extend the functionality of ePO with a comprehensive solution that effectively manages/reduces an organization’s desktop/laptop power usage.

Local utility company rebates usually pay for *PC Power Manager*. That means there are no out-of-pocket costs and the software is yours for ten years. *PC Power Manager* saves enough money to pay for McAfee Security Suite’s annual fee.

### PC Power Manager is as McAfee as McAfee

## The Conservation of Power

***"The cleanest energy is energy we don't use..."***

The power to conserve and utilize energy gives today's enterprise the means to significantly cut energy costs, reduce global carbon emissions, and increase the networks "Green" footprint. ePO users have the benefit of applying Power Policies through a familiar interface and know that they are enforced.

### **PC Power Manager for ePO offers Green Enterprises many Advantages:**

- ROI 460% - Savings are measurable
- Saves on an average of \$60 a machine per year – 1,000 desktops = about \$60,000
- Green – Friendly to the environment and positively boosts sustainability programs
- Eligible for a growing list of utility company and government power conservation rebate programs. Rebates can pay for the entire project, as well as McAfee's Endpoint security solution, and the PC Power Manager software is yours for five years.
- Set up *PC Power Manager* and forget about it – It will automatically take care of itself until you want to add computers or change a policy

---

### **Features:**

- Allows IT professionals to manage enterprise-wide PC conservation program through ePO
- Potential to qualify for tax incentives and carbon trading programs
- Policy driven power management through ePO
- Fine-grained controls for hibernation, standby, shut down, and wake up
- Policies can target groups, domains, etc.
- **Wake-On-LAN Secure** wakes machines up to perform security maintenance tasks (patching, DAT updates) and puts computers back to sleep when tasks are finished
- Centralized, graphical user interface, dashboard-driven policy settings
- Schedule shutdowns
- Granular reporting – what you save, policies, individuals, groups, enterprise, and global sites
- Utilizes the security of ePO

### **Platforms:**

- Supports ePO 4.5 – 5.x – All Windows and Mac Platforms

**Special Note: Many Utility Companies offer special rebate programs to companies who install and use Power Consumption Management solutions. Rebates pays the costs, you pay zero.**
