

ENERGY SMART PC POWER MANAGEMENT

Incentives Available for Entergy New Orleans Customers

A fast and easy way for businesses to save money is to reduce electricity costs associated with computers through PC Power Management. Computers account for approximately 10 percent of the electricity usage of the average office building (@ E Source; data from the U.S. Energy Information Administration). PC Power Management software can save \$10-\$100 per computer annually in electricity costs (according to ENERGY STAR®). Software offers centralized, graphical user interface and dashboard-driven policy settings. IT managers will have access to granular reporting on savings data, policies, groups, enterprise and global sites.

THE PROGRAM:

The Energy Smart New Orleans program provides an incentive of \$10 per computer to commercial customers that install PC Power Management Software on desktop computers.

BENEFITS OF PC POWER MANAGEMENT:

- Allows IT professionals to manage enterprise-wide PC power policies.
- Fine-grained controls for hibernation, standby, shut down and wake up.
- Policies can target individuals, groups, locations, domains, etc.
- “Wake-On-LAN Secure” wakes machines up to perform security maintenance tasks and puts computers back to sleep when tasks are finished.
- Scheduled shutdowns.
- Positively boosts sustainability programs.
- Low maintenance.

PARTICIPATING SERVICE PROVIDER:

Autonomic Software
Alex Gigliotti, Director of Sales
